

# Cleaning, Inspection & Chlorination Services

## Our Services

- ◆ **High Pressure Cleaning & Chlorination to BS6700 Standards**
  - ◆ Reservoirs
  - ◆ Water Mains & Pipelines
  - ◆ Tanks
  - ◆ Screenings

---

## ◆ Reservoir Inspections

- ◆ EPA Advice Note 10 - Cleaning, Testing & Inspections

---

## ◆ Complete Internal & External Surveys & Reports by an Engineer

---

## ◆ Water Mains and Pipelines

- ◆ Swabbing
- ◆ Pressure Testing & Certification to BS Standards
- ◆ Chlorination & Certification to BS Standards

---

## ◆ Fully Independent Services

## High Pressure Cleaning, Inspection & Chlorination Services

Infrastruct Asset Management Services provides Clients in the Potable Water Industry with rapid, reliable and structure-focused cleaning, inspection and chlorination services. Our highly qualified and trained staff use modern and up-to-date specialist equipment for all operations, including using high pressure water jetting equipment and safety and rescue gear.

The EPA's Advice Note 10 (2011) recommends inspections of reservoirs as part of an on-going management approach to critical water infrastructure. Our engineers can inspect and test each reservoir and prepare an accurate condition assessment report as part of a cost effective maintenance strategy to prolong service life of the structure.

We provide a local and nationwide service and are a fully independent Irish company.
